

Germi CALCIO

Saline
Soil
Enhancer

Enriched liquid with microelements

guaranteed analysis

| MAJOR ELEMENTS | % P / V |
|-------------------------------|---------|
| Calcium (CaO) | 14.0 |
| HUMICS ACIDS | % P / V |
| Humics Acids (Humics Acids) | 12.0 |

Available in 1 presentation:
9.5 liters

general information

Germi Calcio is a concentrated liquid Saline Soil Enhancer based on chelated agents saturated in Calcium. Calcium is one of the most important nutritional elements for plants. It is common that in soils with adequate pH levels, calcium is not totally available; even more so, its availability is very limited in saline and sodium-salin soils.

The proper application of **Germi Calcio** benefits in the following ways:

- 1) Favours the liberation of sodium in soil, as well as the interchange sodium/calcium.
- 2) Increases the activity of beneficial microorganisms for soil and the decomposition of organic matter.
- 3) Stable aggregates are formed, which improves the soil structure.
- 4) Improves the capacity of penetration and retention of water in the soil.
- 5) Favours the efficiency in the assimilation of the nutrients presents in the soil.
- 6) Favours and promotes a better root development.

warning and cautions for use

Germi Calcio is a slightly toxic product, however, it is convenient to follow all the basic cautions for the proper use and handling of pesticides, such as: wearing protective clothing (overall), lenses or goggles, cap, mask, gloves and rubber boots.

Avoid eye or skin contact, as well as inhalation or product ingestion. Not smoking, eating or drinking during the use, handling or product application.

| APPLICATION METHOD | DOSES PER HECTARE PER APPLICATION | SEASON AND NUMBER OF APPLICATIONS |
|--|-----------------------------------|---|
| Through the pressurized irrigation system | 5 lts / ha | From 4 to 8 applications through the cycle, depending on the soil conditions, cultivation and the agronomic practices of the region |
| Application directed with the use of equipment (backpack sprayer or tractor) | 2 a 5 lts / ha | From 4 to 8 applications through the cycle depending on the soil conditions, cultivation and the agronomic practices of the region |

incompatibility

Germi Calcio is compatible with most of the agrochemicals of common use, with the exception of those based in mineral oils. It is always advisable to do a small compatibility test, before mixing it with other products. It should only be mixed with registered products in authorized cultivations

instructions for use

Germi Calcio is a liquid soil enhancer of high concentration and solubility. It has been specifically designed to be applied to the root system, whether through irrigation or with the appropriate use of the available machinery.

calibration

ALWAYS CALIBRATE YOUR APPLICATION EQUIPMENT. Before use, SHAKE VIGOROUSLY THE PRODUCT INSIDE THE BOTTLE. Measure the quantity of **Germi Calcio** to use, according to the use recommendations and do not exceed the recommended doses. To get the best results, follow the mixing instructions.

Our recommendations are of general character and illustrative and are based in attained results with reliable experimentation. It is important to adjust them to the cultivation requirements according to your nutrition program based in the soil and tissue analysis.

warranty advice

GERMINARE, S.A. DE C.V. ensures that the content of the bottle is found in conformity with the specifications of its label. Due to the fact that the use of the product is out of control from GERMINARE, there is no expressed or implicit guarantee over the inherent effects and/or results of its use, whether if it is or it is not used according to the instructions provided. The buyer accepts all risks for use and handling of the product.

mixing instructions

Germi Calcio is soluble in water. To get the best mixing, proceed as it follows:

- 1) Put 75% of water to use in the mixing tank and start shaking.
- 2) Add the appropriate amount of **Germi Calcio**.
- 3) Add the rest of the nutrients and/or agrochemicals.
- 4) Finish by adding the rest of the water for the application.
