

Germi PHOS

Foliar
Nutrient
Liquid

Rich in Phosphorous and L - Amino acids

guaranteed analysis

MAJOR ELEMENTS	% P / V
Total Nitrogen (N)	2.5
Total Nitrogen (P ₂ O ₅)	40.0
Potassium (K ₂ O)	8.0
SECONDARY ELEMENTS	% P / V
Calcium (Ca)	0.07
Magnesium (Mg)	0.07
AMINO ACIDS	% P / V
L - Amino acids	4.0
MICROELEMENTS	% P / V
Boron (B)	0.03
Copper (Cu)	0.07
Iron (Fe)	0.20
Manganese (Mn)	0.06
Zinc (Zn)	0.07

Available in two presentations:
1 lt and 20 liters

general information

Germi Phos is a liquid foliar nutrient with high concentration in absorbable phosphorous combined with L-amino acids, potassium, nitrogen, secondary elements and chelated microelements. Its components are quickly absorbed by

the plant and favour a better protein synthesis, stimulate the root development, flowering and collaborate in the formation of the seed.

warning and cautions for use

Germi Phos is a slightly toxic product, however, it is convenient to follow all the basic cautions for the proper use and handling of pesticides, such as: wearing protective clothing (overall), lenses or goggles, cap, mask, gloves and rubber boots.

Avoid eye or skin contact, as well as inhalation or product ingestion. Not smoking, eating or drinking during the use, handling or product application.

CULTIVATION	DOSES	SEASON AND NUMBER OF APPLICATIONS
Vegetables and similar cultivations	2 to 4 lts / ha	1) 2 weeks before flowering 2) Repeat in the fruiting period
Strawberry	2 to 4 lts / ha	1) Just before flowering 2) Repeat every 15 to 20 days in production
Cucurbits (pumpkins, melon, cucumber and watermelon)	2 to 4 lts / ha	1) Just before flowering 2) At the beginning of fruit development
Potato	2 to 4 lts / ha	1) At the beginning of flowering 2) Repeat in 21 days
Fruit trees in general	3 to 6 lts / 1000 lts of water	1) At the beginning of flowering 2) Repeat in 21 days
Cotton	2 to 4 lts / ha	1) At the beginning of kite 2) Repeat dose during flowering of acorns
Bean and soy	2 to 4 lts / ha	1) Just before flowering 2) At the beginning in the formation of the pod 3) 15 days later
Corn, sorghum, oats, wheat and barley	2 to 4 lts / ha	1) In full vegetative development 2) At the beginning of flowering

instructions for use

Germi Phos is a liquid soil enhancer of high concentration and solubility. It has been specifically designed to provide phosphorous and potassium, absorbable through leaves, if it's required it could be also applied to the root system, through fertirrigation.

warranty advice

GERMINARE, S.A. DE C.V. ensures that the content of the bottle is found in conformity with the specifications of its label. Due to the fact that the use of the product is out of control from GERMINARE, there is no expressed or implicit guarantee over the inherent effects and/or results of its use, whether if it is or it is not used according to the instructions provided. The buyer accepts all risks for use and handling of the product.

calibration

ALWAYS CALIBRATE YOUR APPLICATION EQUIPMENT. Before use, SHAKE VIGOROUSLY THE PRODUCT INSIDE THE BOTTLE. Measure the quantity of **Germi Phos** to use, according to the use recommendations and do not exceed the recommended dose. To get the best results, follow the mixing instructions.

incompatibility

Germi Phos is compatible with most of the agrochemicals of common use, however, it is always advisable to do a small compatibility test, before mixing it with other products.
